Abstracts

The global Instant Coconut Milk Powder market size is expected to reach \$ 498 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Instant coconut milk powder is a powder made from coconut milk or coconut milk concentrate through spray drying and instant dissolving. Its key feature is its rapid dissolution in cold or warm water, forming a liquid similar to coconut milk. It is primarily used in beverage preparation and functional foods, and can also be used in some baking and dessert recipes. In 2025, the production volume of Instant Coconut Milk Powder was approximately 15,013 tons, with a unit price of approximately US\$21.6/kg and a gross profit margin of approximately 31.92%.

The global instant coconut milk powder market is experiencing steady growth, primarily driven by the trend towards plant-based diets, increased health awareness, and growing demand for ready-to-drink beverages and functional foods. The convenient preparation of instant coconut milk powder has led to its widespread use in coffee, milk tea, meal replacement powders, and functional drinks. Market opportunities include: 1) the suitability of instant products for fast-moving consumer goods (FMCG) scenarios; 2) increased demand for natural plant-based ingredients in high-end functional foods and health supplements; and 3) rising interest in plant-based dairy products in emerging markets. Meanwhile, market challenges include fluctuating raw material prices, high processing costs for coconut milk powder, and competition from other plant-based milk powders (such as oat milk and almond milk).

This report studies the global Instant Coconut Milk Powder production, demand, key manufacturers, and key regions.
