An instrument air compressor is a type of air compressor used in industrial and manufacturing applications to provide a clean and dry supply of compressed air to various instruments and equipment. These compressors are designed specifically for applications where the compressed air quality is critical for the operation of sensitive instruments such as pneumatic controls, valves, and actuators. The compressor typically includes a filtration system that removes moisture, oil, and other contaminants from the air before it enters the instrument or equipment. The size and capacity of the instrument air compressor depend on the specific application and the amount of compressed air required.
