According to our (Global Info Research) latest study, the global Instrument Panel Beam market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The instrument panel beam is used as a component to strengthen the instrument panel of the vehicle body. The instrument panel beam is a component consisting of hollow materials with a circular cross section. Its shape is that the large diameter part and the small diameter part are connected with each other in the axial direction, and are arranged in the width direction of the vehicle through the bracket. In order to reduce the mass of the car, we also hope that the instrument panel crossbeam has a lower mass and is made of aluminum and other metals.
