Abstracts

A counterfeit detector pen is a pen used to apply an iodine-based ink to banknotes in an attempt to determine their authenticity. Counterfeit detector pens are used to detect counterfeit Swiss franc, euro and United States banknotes, amongst others. Typically, genuine banknotes are printed on paper based on cotton fibers and do not contain the starches that are reactive with iodine. When the pen is used to mark genuine bills, the mark is yellowish or colourless. Such pens are most effective against counterfeit notes printed on a standard printer or photocopier paper. The chemical properties of US banknotes before 1960 make marking pens useless.

According to our (Global Info Research) latest study, the global Counterfeit Detector Pens market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
