According to our (Global Info Research) latest study, the global Insect Viral Biopesticides market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Insect virus biopesticides are a type of product that use specific insect viruses to carry out biological control of agricultural pests. These biopesticides work by infecting pests and multiplying in their bodies, eventually causing their death. Insect viral biopesticides are relatively environmentally friendly and targeted, and have less impact on non-target organisms and the environment. In the future, insect viral biopesticides will develop personalized insect viral biopesticides, customized according to the special conditions of different regions and farmland. The development trend of insect viral biopesticides shows that the industry is developing in a more environmentally friendly, intelligent and sustainable direction to meet the needs of agricultural production while reducing negative impacts on the environment.
