According to our (Global Info Research) latest study, the global Insulated Thermoplastic Hose market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Insulated thermoplastic hose is a type of hose used for conveying high-temperature fluids. Its main characteristics are good insulation performance and high-temperature resistance, which can withstand high-temperature and high-pressure fluids, while also having a certain degree of flexibility and strength. Insulated thermoplastic hoses are usually composed of inner tubes, insulating materials, and outer tubes. The inner tubes can withstand high-temperature and high-pressure fluids, and the insulating materials can insulate the fluids. The outer tubes can protect the hoses from the influence of the external environment. Insulated thermoplastic hoses are widely used for the transportation of various high-temperature fluids, such as steam, oil, chemicals, etc., and are commonly used in industries, chemicals, energy, and other fields.
