The global Insulated Thermoplastic Hose market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Insulated thermoplastic hose is a type of hose used for conveying high-temperature fluids. Its main characteristics are good insulation performance and high-temperature resistance, which can withstand high-temperature and high-pressure fluids, while also having a certain degree of flexibility and strength. Insulated thermoplastic hoses are usually composed of inner tubes, insulating materials, and outer tubes. The inner tubes can withstand high-temperature and high-pressure fluids, and the insulating materials can insulate the fluids. The outer tubes can protect the hoses from the influence of the external environment. Insulated thermoplastic hoses are widely used for the transportation of various high-temperature fluids, such as steam, oil, chemicals, etc., and are commonly used in industries, chemicals, energy, and other fields.
