According to our (Global Info Research) latest study, the global Insulating Functional Devices market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Insulating materials, also known as dielectrics, refer to substances that do not reach points or conduct microscopic electrodes under the action of DC voltage, and their resistance is generally greater than 10 $\Omega \cdot m$. The main function of insulating materials is to isolate live conductors of different potentials in electrical equipment, so that current can flow in a certain path, and can also play a role in mechanical support and fixation, as well as arc extinguishing, heat dissipation, energy storage, moisture-proof and mildew-proof. Or improve the potential distribution of the electric field and protect the conductor.
