Abstracts

Insulating materials, also known as dielectrics, refer to substances that do not reach points or conduct microscopic electrodes under the action of DC voltage, and their resistance is generally greater than $10^9 \Omega \cdot m$. The main function of insulating materials is to isolate live conductors of different potentials in electrical equipment, so that current can flow in a certain path, and can also play a role in mechanical support and fixation, as well as arc extinguishing, heat dissipation, energy storage, moisture-proof and mildew-proof. Or improve the potential distribution of the electric field and protect the conductor.
