The global Insulation and Fireproof Materials market size is expected to reach \$ 1998.9 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

The global chemical industry is part of the global economic development, and the cyclical economic development envelopes the global chemical industry. In recent years, global economic growth has slowed down, and the growth rate of the chemical industry has also gradually slowed down. The development of emerging economies such as China and India has continued to promote the global chemical industry to maintain a certain development trend in the past few years. In the future, these economies will continue to drive the chemical industry market forward with their large population base and strong domestic demand growth.

Fireproof clothing is made of a composite material of flame retardant fiber fabric and vacuum aluminized film, without asbestos, with light specific gravity, high strength, flame retardant, high temperature resistance, thermal radiation resistance, waterproof, wear resistance, folding resistance, and the human body Harmless and other advantages, it can effectively ensure that firefighters and workers in high temperature places are close to the heat source without being burned by extreme heat, flame and steam. Fireproof clothing is composed of multiple layers of fabrics such as outer layer, thermal insulation layer, comfort layer, etc. The material of this combined part can be made into single layer or multiple layers.
