The insulation piercing clamp is a product of the continuous development of the construction industry. It is an emerging cable branch technology, and it is widely used in the construction shaft cable connection. With the continuous development of the construction industry, this technology is becoming more and more in the application process. Perfect, and achieved good application results. At present, a large number of overhead insulated conductors are used in the construction and transformation of new rural electrification, and the insulation rate of rural power grids has been greatly improved. In the construction process of overhead insulated conductors, insulation piercing clamps are widely used for line lapping, and the market will increase greatly with the upgrading of infrastructure facilities.

Insulation piercing clamps connect and make electrical contact with conductor ends, whatever the conductor cross-section, type and insulation. Because they pierce the insulation during installation, preparatory work on the conductor, such as stripping or brushing the contact area, is eliminated.
