The global Integral Venturi Flow Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Venturi Flow Meter is a flow meter based on measuring differential pressure. It consists of embedding a reduced-diameter conical restrictor (called a Venturi throat) in the passing pipe. When the fluid passes through the throat, the phenomenon of velocity increase and static pressure decrease occurs, and the two are calculated using Bernoulli's law. Point pressure difference, so that flow can be obtained.
