## Abstracts

The global Integrated Avalanche Backpack market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Integrated into a ski backpack or vest, an avalanche backpack is comprised of an airbag and power source (either a canister of compressed air or gas or an electric fan). When a skier (or snowboarder, sledder, etc.) pulls the attached handle, the airbag inflates to about 150 liters around and behind her torso. In the event of a slide, the inflated airbag keeps the skier at or near the surface of the snow thanks to a process known as granular segregation (i.e. in a mixture, larger objects are more likely to stay at the top while smaller objects sink down).

This report studies the global Integrated Avalanche Backpack production, demand, key manufacturers, and key regions.
