A building management system is a computer system designed to keep track of, and control, the various systems in a building. These systems include: Power, Climate control, Building entry/exit , Water (pumps), Elevators and Lights.

Scope of the Report:

This report studies the Integrated Building Management Systems market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Integrated Building Management Systems market by product type and applications/end industries.

In terms of a building management system, what integrated means is that the building's system management capabilities were part of the building's initial design. In other words, they weren't added after-the-fact. Take, for example, an extension to a house, like another bedroom. This is something a lot of families consider when their needs change with time. If the bedroom were integrated, it would have been designed and built when the rest of the house was. It would exist when you moved in.

The global Integrated Building Management Systems market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
