Abstracts

The global Integrated Circuit (IC) Pin Probe market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

IC pin probes are used to test integrated circuits (ICs). They differ in terms of contact type or pin type. Low profile pins are standard, low-height, printed circuit board (PCB) pins. Solder tail pins are designed to allow for easy soldering, and for other specialized applications. Wire wrap pins use a solderless wrap to achieve electrical connections. Typically, a stripped or unstripped wire is connected onto a wrap post. Straight pins terminate on both sides of the socket or receptacle. Spring loaded pins are telescopic, electromechanical interconnects. They typically consist of one or more contact members (plungers) and a helical coil spring housed within a conductive tube (barrel).
