## Abstracts

According to our (Global Info Research) latest study, the global Integrated Circuit Test Handler market size was valued at USD 1836.4 million in 2022 and is forecast to a readjusted size of USD 3605.1 million by 2029 with a CAGR of 10.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The sorter is mainly used in the verification link in the integrated circuit design stage and the finished product test link in the packaging test stage. Its main purpose is: the sorter automatically transmits the chip to be tested to the test station (used to connect the chip to the test machine and test the position), and the pin of the chip to be tested is connected to the functional module of the test machine through the special connection line on the test station, After testing, the testing machine transmits the test results to the sorting machine, which marks, classifies, and receives the detected chips based on the test results. The types of testing sorting machines are generally divided into translational testing sorting machines, gravity testing sorting machines, and rotary tower testing sorting machines. In a gravity sorting machine, the chip slides down from the top to the testing station for testing; The horizontal mechanical arm of the translational sorting machine can vacuum extract chips and place them in the testing station; The rotary tower sorting machine is driven by the main rotary table to rotate the chip to the testing station. Due to differences in working principles, the testing speed, applicable chip size, and applicable packaging type of the three types of sorting machines also vary. The current market share of the application of translation type sorting machines is the highest, followed by rotary tower type, and gravity type is the smallest. The technical difficulty is also the same in terms of sorting. The translational sorting machine has a large workload and multiple application scenarios, making it the equipment with the

highest technical difficulty.
