## Abstracts

The global Integrated Extractor Hood market size is expected to reach \$ 3897 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

In 2025, global production of integrated extractor hoods reached approximately 4.5 million units, based on an average market price of around US\$ 520 per unit. Industry gross profit margins generally ranged from 30% to 45%, reflecting value added from integrated structural design, airflow optimization, and smart control functionality. Global production capacity in 2025 was estimated at about 5.8 million units, indicating sufficient manufacturing capability to support growing demand from modern kitchen installations.

Integrated extractor hoods are kitchen ventilation appliances that combine extraction, filtration, and housing into a single compact unit. They are designed to improve space efficiency, reduce visual clutter, and provide effective removal of smoke, grease, and odors during cooking.

The industrial chain includes upstream motors, fans, filters, electronic control modules, metal or composite housings, and lighting components. The midstream focuses on product assembly, airflow system integration, acoustic optimization, and safety testing. Downstream applications mainly involve residential kitchens, real estate developments, kitchen renovation projects, and appliance retail channels.
