Abstracts

Integrated facility system switches refer to network switching devices used to connect, control and manage various subsystems and devices in integrated facility systems. These subsystems and equipment may include electrical systems, lighting systems, HVAC systems, security monitoring systems, communications systems, etc. Integrated facility system switches enable different devices and systems to communicate, collaborate, and centrally manage each other by providing network connectivity and data exchange capabilities. These switches typically have multiple ports for connecting various devices and support various network protocols and communication standards for flexible integration and control. The main function of the integrated facility system switch is to promote the centralized monitoring, management and control of the integrated facility system to improve the operating efficiency, safety and comfort of the building.

According to our (Global Info Research) latest study, the global Integrated Facility System Switch market size was valued at US\$ 3878 million in 2023 and is forecast to a readjusted size of USD 5975 million by 2030 with a CAGR of 6.3% during review period.

With the widespread application of information technologies such as cloud computing, big data, and the Internet of Things, the network equipment industry has ushered in new development opportunities. Especially in the context of the country's continuous encouragement and support for informatization construction, driven by policies such as 'Internet +', Industry 4.0 and new infrastructure, the integrated facility system switch market has further developed. In addition, switches are mainly composed of chips, optical devices, connectors, resistive components, casings, PCBs and other resources, among which chips account for the highest cost.
