Abstracts

An integrated facility system is a system that integrates the management and control of various facilities and equipment within a building. These facilities and equipment can include electrical systems, lighting systems, HVAC systems, security monitoring systems, communications systems, etc. The comprehensive facility system provides centralized monitoring, management and control functions for various facilities within the building by integrating multiple subsystems. Such systems usually include components such as sensors, controllers, data transmission networks, monitoring software, and human-machine interfaces to provide an intuitive user interface. The main goal of the integrated facility system is to improve the building's operating efficiency, save energy and reduce emissions, improve safety and comfort, and reduce operating costs.

According to our (Global Info Research) latest study, the global Integrated Facility Systems market size was valued at US$ 31180 million in 2023 and is forecast to a readjusted size of USD 46610 million by 2030 with a CAGR of 6.2% during review period.

Modern technology is increasingly used in comprehensive facility systems, including the Internet of Things, big data, artificial intelligence and other technologies. The application of these technologies makes the management of comprehensive facility systems more intelligent and efficient, improving the efficiency and operation quality of facilities. As the level of urbanization increases, the demand for comprehensive facility systems continues to grow, and the market size continues to expand. Especially driven by concepts such as smart cities and green buildings, the integrated facility system market has shown rapid growth. To sum up, the integrated facility system market has broad development prospects and huge market potential.
