Abstracts

Integrated Passive Devices are attracting an increasing interest due to constant needs of handheld wireless devices to further decrease in size and cost and increase in functionality. Many functional blocks such as impedance matching circuits, harmonic filters, couplers and baluns and power combiner/divider can be realized by IPDs technology. IPDs are generally fabricated using standard wafer fabrication technologies such as thin film and photolithography processing. IPDs can be designed as flip chip mountable or wire bondable components and the substrates for IPDs usually are thin film substrates like silicon, alumina or glass.

Scope of the Report:

This report focuses on the Integrated Passive Devices (IPD) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. EMEA is likely to hold the largest share of the integrated passive device market by 2023.
