The Integrated Solution of Source-Network-Load-Storage is an optimized model for comprehensive energy systems. By coordinating renewable energy generation (source), power grid transmission and distribution (network), demand-side load management (load), and energy storage systems (storage), it enables the collaborative operation of energy production, transmission, consumption, and storage. This solution enhances the flexibility and stability of the power system, improves its ability to accommodate the variability of renewable energy, reduces energy consumption costs, and facilitates the large-scale integration of new energy sources. It serves as a key technological pathway for energy structure transformation and achieving carbon peaking and carbon neutrality goals.

The market drivers for the Integrated Solution of Source-Network-Load-Storage mainly include the accelerating demand for energy structure transformation, the urgent need for enhanced grid flexibility, and the dispatching challenges brought by the large-scale integration of renewable energy. With the advancement of carbon peaking and carbon neutrality goals, regions are actively deploying new energy projects, requiring coordinated source-network-load-storage operations to improve system stability and operational efficiency. At the same time, industrial and commercial users are increasingly seeking to reduce energy costs and enhance energy autonomy, driving widespread adoption of such integrated solutions in scenarios like industrial parks and
