In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The integrated sphere spectroradiometer test system is an optical test system that uses an integrating sphere as a measuring device. It is used to accurately measure the luminous flux, chromaticity, electrical parameters and other performance indicators of light sources or lamps, and has the ability to measure multiple parameters simultaneously with high precision. Through the built-in high-precision spectrometer and photometer, it can accurately capture and analyze photochromatic and electrical data in the uniform light field of the integrating sphere, thus providing a reliable basis for the research and development and quality control of lighting products. The advantages of this system are its fast test speed, good data repeatability and stability, and the ability to achieve one-click automated testing, which greatly improves test efficiency and accuracy. In addition, it also supports remote control and data cloud storage, which facilitates data management and analysis for large-scale production and laboratories.
