The global Intelligent Bionic Manipulator market size is expected to reach \$ 842.7 million by 2030, rising at a market growth of 10.0% CAGR during the forecast period (2024-2030).

The global medical device market is estimated to be US\$603.3 billion in 2023, with a compound annual growth rate of 5% expected in the next six years. Global health care expenditure currently accounts for approximately 10% of global GDP, and the proportion will continue to increase in the next few years. This is primarily due to the increasing demand for healthcare from an aging population, the rising prevalence of chronic and infectious diseases, and the expansion of emerging markets. The medical device market plays an important role in the healthcare spending industry. The medical device market is driven by a variety of factors, including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, increasing medical expenditures, and increasing awareness of early stage disease diagnosis and treatment.

The bionic hand was first developed in 1963 to help children affected by the sedative-hypnotic drug thalidomide. The British 'i-LIMB' bionic hand is the world's most advanced bionic hand to market, with 5 freely movable fingers, this invention beat the other three finalists and won the MacRobert Award in 2008.) award, the UK's highest engineering award. In February 2013, Switzerland invented the world's first tactile bionic hand, which will be used for human transplantation.
