According to our (Global Info Research) latest study, the global Intelligent Breeding Platform market size was valued at US\$ 1194 million in 2025 and is forecast to a readjusted size of US\$ 3085 million by 2032 with a CAGR of 14.5% during review period.

The intelligent breeding platform is a fully digital breeding decision-making system integrating biotechnology, information technology, and artificial intelligence, serving as a core infrastructure for the Breeding 4.0 era. Driven by big data and AI algorithms, it integrates multi-dimensional data such as genotype, phenotype, and environment to achieve intelligent, efficient, and precise management of germplasm, experimental design, data analysis, trait prediction, parent selection, and variety breeding.

The intelligent breeding platform is an integrated, cloud-based, and visualized digital platform built upon cloud computing, big data, artificial intelligence, bioinformatics, and high-throughput omics technologies (genomics/phenomena/metabolomics). Its core function is to integrate breeding data across the entire industry chain, automate analysis, and provide intelligent prediction and decision-making, transforming traditional 'experience-based breeding' into 'data-driven precision intelligent breeding,' significantly shortening cycles, improving efficiency, reducing costs, and increasing accuracy.

The core functions of the intelligent breeding platform include germplasm resource management, breeding experiment management, genotype big data analysis, phenotypic data management and analysis, intelligent prediction and decision-making, and breeding simulation.
