## Abstracts

The global Intelligent Building Automation Technology Solution market size is expected to reach \$ 98147 million by 2032, rising at a market growth of 9.4% CAGR during the forecast period (2026-2032).

Intelligent Building Automation Technology Solution refers to an integrated solution that combines sensors, control systems, communication networks, and software platforms to monitor and automate building operations such as HVAC, lighting, security, energy management, and equipment performance. It enables system integration, energy optimization, and digital operations, improving efficiency, reducing energy consumption, and enhancing occupant comfort.

Intelligent building equipment is evolving from isolated smart devices to fully integrated system-level intelligence, with value shifting from hardware to data and platform capabilities. Future competition will focus less on individual device performance and more on connectivity, data integration, and ecosystem strength. Energy efficiency and carbon management are becoming key drivers due to sustainability goals and rising energy costs.

From a market perspective, traditional building automation leaders (e.g., Siemens, Schneider) hold strong system integration capabilities, while ICT players (e.g., Huawei, Cisco) are more competitive in connectivity and platform layers, reflecting a convergence of OT (Operational Technology) and IT (Information Technology). Additionally, with the advancement of AI and digital twin technologies, the industry is moving from automation toward predictive and self-optimizing building systems.
