The global Intelligent Building Solution market size is expected to reach \$ 38917 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

Intelligent Building Solution refers to the integration of key subsystems within a building (such as HVAC, lighting, security/access control, fire protection, energy metering, elevator and equipment maintenance, indoor environmental quality, etc.) through a unified network and data platform to achieve automatic control, data collection, analysis and optimization, and visualized operation and maintenance, thereby improving energy efficiency, comfort, safety, and operational efficiency (usually centered on BMS/BAS, and superimposed with IoT sensing, cloud platform, AI analysis, digital twins, and application layer workflows).

In the past two years, the growth of smart buildings has come not only from upgrades to traditional BMS/BAS, but also from 'platformization + connectivity + analytics': using IoT sensors to bring more devices and spatial status online, and then aggregating data from multiple systems to cloud/edge platforms for energy consumption optimization, space utilization optimization, predictive maintenance, and centralized operation and maintenance across multiple sites. Manufacturers and integrators are also increasingly emphasizing open protocols and interoperability (such as building automation ecosystems represented by BACnet) to reduce integration costs and improve scalability.

Against the backdrop of energy conservation, carbon reduction, and fluctuating electricity prices, smart buildings place greater emphasis on quantifiable ROI (energy consumption/peak/valley/demand response, equipment health, and maintenance manpower efficiency), and are rapidly introducing AI/ML and digital twin capabilities for

continuous optimization. Simultaneously, the convergence of building IT/OT and IoT expands the attack surface, and network and device security (asset visualization, partitioning and isolation, identity and encryption, wireless security, etc.) is becoming a crucial hurdle for solution selection.
