## Abstracts

The global Intelligent City (Smart City) market size is expected to reach \$ 5927078 million by 2032, rising at a market growth of 17.9% CAGR during the forecast period (2026-2032).

Intelligent city (smart city) is a city that conducts comprehensive analysis, optimization and management of urban operation based on Internet, Internet of Things, big data and other technical means. It can not only achieve digital management of urban infrastructure, public services and other aspects, but also integrate and optimize the allocation of public resources in the city, improve the management efficiency of the city, and provide residents with a more convenient, efficient and comfortable urban life. Smart cities are not a single product, but a comprehensive system composed of perception devices, communication networks, data platforms, application software, cloud services, AI algorithms, urban operation centers, and industry solutions. The core goal is to improve urban operational efficiency, public safety levels, resource utilization efficiency, people's livelihood service capabilities, and government governance capabilities.

The overall intelligent city (smart city) market is in a sustained growth stage, mainly driven by urban digital governance, traffic congestion control, public safety upgrading, energy efficiency improvement, renovation of old infrastructure, popularization of 5G and IoT, application of AI big models, and digital government construction. Smart transportation, smart security, smart energy, smart government, smart water management, and urban operation management platforms are currently the most important construction directions. Among them, transportation, security, and energy projects have higher value, while government and urban data platforms emphasize data integration and long-term operation capabilities. The focus of competition in future smart

cities will shift from single point project construction to city level data fusion, cross departmental collaboration, AI intelligent decision-making, digital twin simulation, low-carbon energy management, network security, and continuous operation services. Overall, smart cities are not a short-term construction concept, but a long-term direction for digital upgrading of urban governance. With the expansion of urban scale, increasing pressure on public services, and increasing demand for intelligent infrastructure, the market will still maintain strong growth resilience.
