According to our (Global Info Research) latest study, the global Intelligent Completion System market size was valued at US\$ 1799 million in 2025 and is forecast to a readjusted size of US\$ 2711 million by 2032 with a CAGR of 6.1% during review period.

The intelligent completion system is an advanced completion solution that integrates sensors, control devices and real-time data transmission technology. It can dynamically monitor and control the formation, wellbore and production parameters during the production of oil and gas wells. The system can adjust production equipment (such as controllable valves and flow control devices) remotely or automatically to optimize oil and gas production, reduce water and gas intrusion, and extend the life of oil wells. The intelligent completion system significantly improves the efficiency and flexibility of oilfield development and is an important part of digital oilfield and smart energy management.
