Intelligent Domain Control Platform is a comprehensive control platform used in fields such as smart cars, smart transportation, and smart cities. Its main function is to integrate and manage various vehicles, equipment, systems and applications, and achieve intelligent collaborative control and decision support through data collection, analysis and processing.

The intelligent domain control platform market is experiencing rapid growth and the introduction of large-scale mass production. With cockpit- and driver-side integrated domain control (the integration of the cockpit and driving domains) as the primary focus, penetration is rapidly increasing, and the next three years will be a period of rapid growth. The market is characterized by OEMs leading R&D and design, active third-party suppliers, a mainstream adoption of multi-core solutions, and fierce competition among chip manufacturers.

Key Trends: Transition from Electrification to Intelligence: The smart cockpit has shifted from early functional penetration driven to value growth driven by new intelligent applications, with intelligent domain control as a key enabler for this intelligent transformation. Cockpit- and driver-side integration becomes mainstream: Cockpit- and driver-side integration (the integration of the cockpit and driving domains) is the primary development direction currently and in the future, and will become a crucial foundation for smart cars to achieve higher levels of intelligence. Accelerated Deployment of

Domain Controllers: With the evolution of automotive E/E architecture and cost reductions, domain controllers are rapidly becoming commonplace in mid- and low-end models.
