## Abstracts

According to our latest research, the global Intelligent Manhole Cover Management System (IMCS) market size will reach USD 122.5 million in 2030, growing at a CAGR of 21.2% over the analysis period.

An intelligent manhole cover management system (IMCS) is one of the most important basic platforms in a smart city to prevent frequent manhole cover accidents. The system is comprised of a monitoring device that is attached to manhole covers, a data concentrator and a software platform.

The Intelligent Manhole Cover Management System (IMCS) market report provides a detailed analysis of global market size, regional and country-level market size, segmentation market growth, market share, competitive Landscape, impact of domestic and global market players, value chain optimization, trade regulations, recent developments, opportunities analysis, strategic market growth analysis, product launches, area marketplace expanding, and technological innovations.

A large number of manhole covers, which are widely distributed throughout the city, are hard to supervise. The loss or damage of manhole covers might influence the drainage facilities and pose a threat to the safety of pedestrians. The intelligent manhole cover management system (IMCS) can monitor manhole covers in real time, and if it detects an abnormal opening, it will transfer the data to the urban management monitoring network for instant action.
