The global Intelligent Military Textiles market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Textiles are the second largest equipment in the military after weapons and equipment, second only to steel materials. The meaning of military textiles is very broad. There are approximately 10,000 products in the US Department of Defense property catalog that are partially or fully related to textiles. Military textiles are mainly divided into conventional textiles and special textiles. Conventional textiles mainly refer to military uniforms, including uniforms, formal wear, training uniforms, physical training uniforms, underwear, fleece jackets, cotton-padded clothes, bedding, sleeping bags, carrying equipment, etc., which are mostly made of ordinary fiber materials. Special textiles include protective textiles for soldiers and supporting textiles for military industry. They refer to special textiles that protect the safety of officers and soldiers on the battlefield and special textiles required for military equipment. Soldier protective textiles are further divided into categories such as individual soldier protection, nuclear, biological and chemical protection and other special protective textiles, including body armor, chemical protective clothing, anti-immersion clothing, missile propellant protective clothing, nuclear, biological and chemical contamination protective clothing, acid and alkali proof overalls , flame-retardant combat uniforms, camouflage camouflage clothing, electromagnetic radiation protective clothing, flight suits, high temperature protection clothing, cold-proof clothing, life jackets, anti-static clothing, space suits, lightning protection boots, etc. Military supporting textiles include oil storage and transportation materials, camouflage and shielding materials, textiles for weapons and ammunition, textiles for aerospace and strategic weapons, and special cables. As modern warfare develops toward informatization, intelligence, and unmanned warfare, the requirements for individual soldiers' equipment are getting higher and higher, and they will inevitably
