The intelligent mine power supply management and control system consists of an intelligent power supply management and control platform, a super industrial ring network and an integrated wireless network, a monitoring substation, an AI edge computing box, an intelligent integrated protector, a Kuanghong integrated protector, sensors, cameras, access control and other products. The system senses and collects relevant data about equipment and the environment in the underground power supply system through multiple types of terminals. The monitoring substation performs local calculation, judgment and normalization of the data, and transmits the data efficiently and reliably to the intelligent power supply management and control platform. Driven by mine power system data, the platform integrates and correlates multi-source data of the power supply system and power-consuming equipment to achieve intelligent data analysis and decision-making. The platform can be deployed on public clouds, private clouds, and hybrid clouds to become a shared platform.
