Abstracts

Oil & gas pipelines are subject to many problems such as corrosion and wax deposition, which can result in mishaps and directly affect functioning of the pipeline. A pig (pipeline inspection gauge) is a device that can travel through pipelines for inspection and maintenance purposes. Pigs can be used to inspect and clean the pipeline. In-line pigs are used for analysing pipeline condition and provide accurate information about the same. As pipelines transport valuable fluids, overall infrastructure of the pipeline is expensive and needs regular maintenance in order to ensure smooth functioning and longevity.
