Farmers' use of plantation intelligence (PI) and data mining technologies has increased, and waste of resources and manpower has decreased. The field of irrigation systems will dominate the market for intelligent planting management systems, by value. The intelligent irrigation system can control and monitor the progress of water use in growing crops based on data collected by sensors. In addition, the use of smart irrigation systems reduces the amount of water required for irrigation, thereby reducing operating costs, especially for large agricultural fields. According to tests by the Irrigation Association (IA) and the International Center for Water Technology (California), smart irrigation systems save about 20% more water than traditional irrigation systems, which is one of the main factors driving their market demand.
