Abstracts

Intelligent Pump Control (IPC) system offers an effective solution to ragging through detecting the early signs of blockages and taking action to automatically clear the problem. Pumps are maintained in a cleaner state which delivers further improvements in other key pump performance measures including pump reliability, up-time and energy efficiency.

Scope of the Report:

This report focuses on the Intelligent Pump and Control Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

IPC system accurately monitors pump performance by 'live' continuous measurement of torque producing current, plus flow and pump speed where appropriate. The live data is compared to measured values taken during commissioning, plus expected pump profile characteristics. Any 'out of profile' performance is instantly detected, giving an early warning indication of ragging. Should the pump 'out of profile' performance extend the profile settings, an automatic drive based cleansing cycle is initiated to clear the pump impeller.

The worldwide market for Intelligent Pump and Control Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
