According to our (Global Info Research) latest study, the global Intelligent Remote Water Meter market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Intelligent remote water meter is an intelligent remote meter reading water meter with remote data transmission, stepped water price, prepayment, and remote valve control functions. As a modern scientific and technological material for water meters, intelligent remote water meter shows its own advantages and functions everywhere.

Intelligent remote water meters not only save the cost of manual meter reading, but also improve the efficiency of meter reading, preventing water theft, water leakage and water bill arrears that water companies hate. The advantages far outweigh the disadvantages, and the overall benefits are higher. Much higher than mechanical water meters. And with the continuous increase of China's population, people's demand for tap water continues to increase, and water supply units have more urgent requirements for scientific, reasonable, intelligent and standardized tap water management. The emergence of intelligent remote water meters and remote meter reading systems happens to be the role of remote water meters in mechanical equipment. The water meter is composed of an electronic collection and signaling module modified on the water meter. The electronic module collects, processes, and stores signals and sends the information to the repeater through communication or communicates directly with the server through the narrowband Internet of Things without intermediate collection equipment.
