In 2025, the global production capacity of Intelligent Safety Light Curtain was approximately 1.8 million units.

Intelligent Safety Light Curtain is an optoelectronic safety protection device used to detect human intrusion or abnormal objects entering hazardous areas of industrial equipment. It consists of infrared transmitters, receivers, signal processing units, controllers, and communication interfaces, enabling real-time monitoring and emergency stop functions when the safety field is interrupted. Compared with conventional safety light curtains, intelligent models provide advanced functions such as self-diagnosis, communication networking, status monitoring, and integration with industrial control systems. The product is mainly used in automated production lines, industrial robots, machine tools, packaging equipment, logistics automation, and semiconductor manufacturing equipment. The product boundary includes safety light curtains and intelligent safety sensing modules, excluding safety scanners, safety mats, and complete machine safety systems.

The intelligent safety light curtain industry chain includes upstream suppliers of optical

components, semiconductor chips, sensors, electronic components, housings, and communication modules; the midstream sector covers optical design, circuit development, embedded software, assembly, calibration, and safety certification; the downstream sector includes industrial automation equipment manufacturers, automotive factories, electronics manufacturers, logistics automation companies, and industrial production facilities. Market growth is driven by industrial automation expansion, stricter workplace safety regulations, robotics adoption, and demand for intelligent manufacturing.
