The global Intelligent Sports Examination Solution market size is expected to reach \$ 285 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

An Intelligent Sports Examination Solution is an integrated systematic scheme for standardized physical fitness tests and sports examinations, relying on AI vision recognition, millimeter-wave radar, high-precision sensors, Internet of Things and cloud computing technologies; it replaces manual invigilation and scoring with automatic action capture, real-time data collection, intelligent judgment and unified result management, realizing the whole-process intelligence of registration, test, invigilation, scoring, data storage and result announcement, effectively eliminating human error and unfairness and adapting to large-scale organized sports examinations such as student physical fitness tests and sports high school/college entrance examinations.

The industry is trending toward full-scenario AI unstaffed invigilation, multi-terminal cloud collaboration and lightweight portable deployment, while policy requirements for strengthening student physical health monitoring and standardized sports examinations have created huge market opportunities in basic education, higher education and community physical fitness assessment, and the integration with health management systems further expands application space; meanwhile, the sector faces challenges including unstable recognition accuracy in complex outdoor environments, high consistency requirements for cross-site test standards, data security and privacy risks in centralized information management, high adaptation costs for special test items and difficulties in popularization in resource-constituted basic-level institutions.
