Abstracts

Threat intelligence is a cyber-security discipline that seeks understanding of sophisticated cyber threats and their detection, analysis, and predictive remediation. Threat intelligence solutions provide an effective and reliable threat detection to alleviate cyber threats based on security events and security intelligence feeds, manage business risks, reduce potential damage, and improve organizations' entire security infrastructure. The primary purpose of threat intelligence system is to help organizations understand and provide predictive remedies for Advanced Persistent Threats (APTs) and exploits, zero-day threats, and other sophisticated attacks on enterprise network security infrastructure. The major forces driving the threat intelligence market are the increasing threat of data breaches due to insider attacks, fast-paced adoption of threat intelligence solutions among SMEs, and increasing adoption of crowdsourced threat intelligence platform.

Scope of the Report:

North America is expected to have the largest market share and dominate the threat intelligence market from 2017 to 2025, due to the presence of a large number of threat intelligence vendors across this region. The main reason for the high growth in the APAC region is the wide adoption of threat intelligence solutions by both SMEs and large enterprises to protect network infrastructure and web, mobile, and IoT applications from vulnerabilities and to prevent attackers from exploiting the security flaws to access critical information.

The global Intelligent Threat Security market is valued at 3830 million USD in 2017 and is expected to reach 9830 million USD by the end of 2023, growing at a CAGR of 17.0% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
