## Abstracts

According to our (Global Info Research) latest study, the global Intelligent Tightening Tools market size was valued at US\$ 875 million in 2025 and is forecast to a readjusted size of US\$ 1264 million by 2032 with a CAGR of 5.5% during review period.

Smart tightening tools are devices used to automatically or semi-automatically tighten fasteners such as bolts and screws. These tools usually combine advanced sensors, electronic control systems and software to greatly improve the accuracy and efficiency of the tightening process.

Intelligent tightening operation is one of the core links in the intelligent manufacturing system, and the quality of its tightening directly affects the quality and safety of the entire product. At present, the concentration of my country's intelligent tightening industry is still relatively low, and the overall market is in the early stages of growth. As my country continues to promote the intelligent and green transformation of the manufacturing industry during the '14th Five-Year Plan' period, the demand for intelligent tightening will increase day by day, and the industry market prospects are huge. However, most of the current intelligent tightening market is foreign multinational brands, whose product advantages are obvious and prices are relatively high. Domestic brands are just starting or laying out. I believe that under the guidance of policies and markets, domestic brands will leap into the international market and compete with foreign brands on the same stage. Tightening operation is one of the core links in the industrial manufacturing system. The quality of tightening operations for key components such as screws and threads directly affects the quality, safety and effectiveness of the entire product. In order to ensure that tightening operations do not miss or mis-tighten, traditional tightening methods have been difficult to meet the needs

of modern industrial production systems. This inefficient, difficult to guarantee safety performance, and heavily dependent on the proficiency of tightening workers will gradually be replaced by intelligent tightening methods with intelligent decision-making systems.

At present, the global market concentration of electric tightening tools is not high, and there are many companies participating in the competition. Among them, high-end products mainly come from the United States and Western Europe. These companies usually set up factories in China to effectively expand their market share. At present, the production output of Chinese manufacturers and multinational companies accounts for almost 67.5% of the global market share. Excluding the production capacity of multinational companies, most products of Chinese domestic brands are used in the civilian field. As the industry is positively correlated with the global economic cycle, it is expected to maintain a relatively slow growth before 2025, and will maintain a compound growth rate of 3.13% by 2025 to achieve sustained growth.
