According to our (Global Info Research) latest study, the global Intelligent Transport System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

On January 18, 2023, China announced that the country's first national-level transportation platform "Qiangguo Transportation" has completed its internal testing and will soon be launched. In the future, it is estimated that the connected transportation capacity will account for more than 90% of the total market transportation capacity. Its "car-hailing" service has been opened for operational testing and has been connected to dozens of online car-hailing capacity companies. ITS is a concept put forward by the United States in the early 1990s. In 2009, IBM proposed the concept of smart transportation. Based on intelligent transportation, ITS integrates high-tech IT technologies such as the Internet of Things, cloud computing, big data, and mobile Internet to solve four problems in real-time traffic monitoring, public vehicle management, travel information services, and vehicle auxiliary control.
