## Abstracts

The global Intelligent Vesicle Medical Dressing market size is expected to reach \$ 784 million by 2032, rising at a market growth of 27.7% CAGR during the forecast period (2026-2032).

Intelligent vesicle medical dressing is an active repair-type wound material composed of nanoscale biological vesicles (natural exosomes / synthetic biomimetic vesicles) compounded with intelligent responsive medical matrices (hydrogel/sponge/membrane materials). It can sense the wound microenvironment (pH, temperature, enzymes, inflammatory factors) and release active substances in a precise and controlled manner. It integrates multiple functions including physical barrier, exudate management, antibacterial and anti-inflammatory effects, and tissue regeneration promotion, belonging to high-end functional wound dressings. The price of intelligent vesicle medical dressings varies by product form, with patch types priced at 8–15 US dollars per piece, hydrogel dosage forms at 12–20 US dollars per piece, and high-end lyophilized models for chronic wounds at 25–40 US dollars per piece; the industrial chain covers upstream raw material end including stem cell culture, exosome isolation and purification, biomimetic vesicle synthesis and medical base materials such as hydrogel and collagen, midstream links dominated by enterprises engaging in formula compounding, intelligent molding, sterile production and quality control of vesicle dressings, as well as downstream sales channels including hospitals, medical beauty institutions, pharmacy chains and e-commerce platforms, serving postoperative medical beauty repair, dermatological barrier care and chronic wound treatment scenarios, with supporting systems such as cold chain logistics, sterilization and medical device compliance certification running through the whole industry chain.
