This report studies the Intelligent Video (IV) market, intelligent video (IV) refers to video that inherently automates video analysis or includes technology that eliminates some manual video analysis processes. Common applications include surveillance cameras that only record when motion is detected, to cameras that automatically “read” and catalog vehicle license plates. Another increasingly common use of intelligent video is the use of facial recognition technology in surveillance systems. Such systems, often called “biometric surveillance,” often eliminate manual surveillance video monitoring and – through the use of searchable biometric templates associated with appropriate meta-data – makes it possible to create alerts when detecting individuals from watchlist databases.
