According to our (Global Info Research) latest study, the global Intelligent Video (IV) market size was valued at USD 3607.8 million in 2023 and is forecast to a readjusted size of USD 11750 million by 2030 with a CAGR of 18.4% during review period.

This report studies the Intelligent Video (IV) market, intelligent video (IV) refers to video that inherently automates video analysis or includes technology that eliminates some manual video analysis processes. Common applications include surveillance cameras that only record when motion is detected, to cameras that automatically “read” and catalog vehicle license plates. Another increasingly common use of intelligent video is the use of facial recognition technology in surveillance systems. Such systems, often called “biometric surveillance,” often eliminate manual surveillance video monitoring and – through the use of searchable biometric templates associated with appropriate meta-data – makes it possible to create alerts when detecting individuals from watchlist databases.

Intelligent video is digital video technology integrated with analytical software. Video analytics software may run on a networked device, such as a sophisticated IP camera, in an embedded system or on a computer computing device.
