## Abstracts

The global Intelligent Warehouse with AGV market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An intelligent warehouse with AGV (Automated Guided Vehicle) is a type of warehouse automation system that uses artificial intelligence algorithms and AGVs to improve the efficiency and accuracy of warehouse operations. AGVs are autonomous mobile robots that can navigate through a warehouse using sensors and cameras, and can be programmed to perform a wide range of tasks, such as transporting goods, picking and placing items, and even taking inventory. In an intelligent warehouse with AGV, these robots can work alongside human workers to increase efficiency and reduce labor costs. The system can also be integrated with other warehouse automation technologies, such as conveyor belts and automated storage and retrieval systems. The intelligent warehouse with AGV can be monitored and controlled using a centralized computer system, which can optimize the flow of goods, manage inventory levels, and reduce errors in picking and shipping. This technology is a key component of Industry 4.0, which is the trend toward automation and data exchange in manufacturing and other industries.
