Intense Pulse Laser Therapy (IPL) is a non-invasive medical treatment that uses high-intensity pulses of light to penetrate the skin and target specific areas of concern. IPL machines are typically used for cosmetic treatments such as hair removal, acne reduction, and skin rejuvenation. The machine works by emitting short bursts of high-intensity light that are absorbed by the skin's pigment. This causes a heat reaction in the targeted area, which can help to destroy unwanted hair follicles or stimulate collagen production for skin rejuvenation.
