Abstracts

The global Intensified CCD Camera market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Intensified CCD (ICCD) cameras use a CCD sensor combined with an intensifier. They are optimal for low-light or single photon applications due to the electron multiplying component of the intensifier. They are also ideal for applications which require less than nanosecond exposure time, such as laser induced breakdown spectroscopy or fluorescent lifetime imaging microscopy due to the intensifier's ability to rapidly close the shutter while still converting any photons detected into photoelectrons.

This report studies the global Intensified CCD Camera production, demand, key manufacturers, and key regions.
