IMRT device is an advanced radiotherapy device that precisely controls the intensity distribution of the beam of radiation, allowing high doses of radiation to be delivered to the tumor target during treatment while maximizing the protection of surrounding normal tissue. Through complex computer algorithms and multi-leaf collimator (MLC) and other technologies, IMRT equipment can adjust the intensity and direction of the radiation beam according to the three-dimensional shape and position of the tumor, so as to achieve personalized and precise treatment plans, improve treatment effects and reduce side effects, and is widely used in the treatment of various malignant tumors.
