The global Intensive Recirculating Aquaculture System market size is expected to reach \$ 1233 million by 2032, rising at a market growth of 8.0% CAGR during the forecast period (2026-2032).

Intensive Recirculating Aquaculture System is a relatively new and highly intensive aquaculture model. It collects and recycles wastewater generated in the aquaculture pond through a series of water treatment units, removes pollutants such as residual bait and feces, total ammonia nitrogen (TAN), nitrite nitrogen (NO₂-N), and performs physical filtration, biological filtration, CO₂ removal, disinfection, oxygenation, temperature control and other treatments on the wastewater, and then re-inputs the purified water into the aquaculture pond to achieve the recycling of water resources.
