Abstracts

According to our (Global Info Research) latest study, the global Intent-Based Networking (IBN) Technology market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Intent-based networking (IBN) is a systematic approach to bind infrastructure management and business intent. It is a network management approach in which artificial intelligence (AI) and machine learning (ML) play a major role by automating all the organizational tasks which can be applied across the network i.e., it helps in accomplishing a specific purpose or intent. IBN technology enables organizations to define their network policies and objectives in more abstract terms, such as desired application performance, security requirements, or compliance goals. The network infrastructure then interprets these intentions and automatically adjusts its configuration and behavior to meet them.

This report is a detailed and comprehensive analysis for global Intent-Based Networking (IBN) Technology market. Both quantitative and qualitative analyses are presented by company, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.
